

Making Development More Sustainable: Sustainomics Framework and Practical Applications

This book provides a comprehensive, rigorous and practical analysis of sustainable development prospects today, by applying the innovative sustainomics framework. The main message is optimistic – although the problems are serious, we can respond effectively by making development more sustainable, provided we begin immediately. Sustainomics shows us the first practical steps in making the transition from the risky business as-usual scenario to a safe and sustainable future.

Mohan Munasinghe explains the key principles of sustainomics concisely, clearly and free of technical jargon. Mathematical and other details are provided in annexes. The book also contains empirical case studies that are practical and policy-relevant over a wide range of time scales, countries, sectors, ecosystems and circumstances. The extensive bibliography will be useful for further research.

This book will appeal to all stakeholders, including students, researchers, teachers, policy analysts, decision makers, development experts, and citizens.

“It’s all here! Sustainomics - everything you wanted to know about sustainable development. It’s all comprehensible, and the eminent author has provided helpful examples from around the world.”

Prof. Thomas Schelling, 2005 Nobel Laureate in Economics & Professor Emeritus, Univ. of Maryland, USA.

“This book is an impressive presentation of policy-oriented research. Professor Munasinghe effectively mobilizes a wide array of scientific theories, methods and tools towards the goal of making development more sustainable. In a trans-disciplinary spirit, but with his feet firmly on the ground and drawing on economic, ecological and social disciplines, the author presents well chosen and eminently practical case studies. These examples at levels ranging from the global to the local, convincingly demonstrate the relevance of his approach.”

Prof. J.B. (Hans) Opschoor, Rector, Institute of Social Studies, and Professor of Environmental Economics, Free University Amsterdam, The Netherlands

“Sustainomics is a big idea.....it is a gift, and we should do our best to try to use it well. Munasinghe provides wonderfully clear explanations and enlightening examples of actual development planning analyses.... readers will leap with him from concept to application.... invaluable to understand how sustainable development really works, and can protect environmental, economic and social values.”

Dr. R. Reibstein, Centre for Energy & Environmental Studies, Boston Univ., USA.

“Summarizes advances in theory and practice of new analytical framework of sustainomics. Excellent and diverse case studies... well presented analytical tools, real-world applications, and superb bibliography. Munasinghe is a long-standing champion of sustainable development, reaching out to values, beliefs, and religion.”

Dr. A. Seth, Country Director, The World Bank, Washington DC, USA.

Munasinghe Institute for Development
'making development more sustainable-MDMS'

Professor Mohan Munasinghe shared the 2007 Nobel Prize for Peace (as vice chair, UN intergovernmental Panel on Climate Change IPCC-AR4). He is a Sri Lankan citizen, who has earned postgraduate degrees in engineering, physics, and development economics, from Cambridge University, UK, the Massachusetts Institute of Technology, USA, and McGill University and Concordia University, Canada, as well as several honorary doctorates (honoris causa).

Presently, he is chairman of the Munasinghe Institute for Development (MIND), Colombo; director-general of the Sustainable Consumption Institute (SCI) and institute professor at the University of Manchester, UK; and honorary senior advisor to the Government of Sri Lanka, Colombo. He has held a number of high level decision making positions in the past, including senior advisor (energy and information technology) to the President of Sri Lanka, senior advisor/manager for sustainable development at the World Bank, Washington DC, and developing country advisor to the US President's Council on Environmental Quality.

He has implemented international development projects for four decades, and is world renowned for trans-disciplinary thinking, having had direct field experience in agriculture, climate change, disaster management, economics, environment, energy, information technology, poverty, telecommunications, transport, urban infrastructure, and water resources projects in most developing countries. He has taught in major universities worldwide, and won a number of international awards and medals for his research. He has authored over ninety books and several hundred technical papers, and serves on the editorial boards of a dozen international journals.

To my grandchildren Linara (Lena) and Ayaan (Babu), and their progeny – in the fond hope that they will inherit a world which is more sustainable than ours!

Munasinghe Institute for Development (MIND) Series on Growth and Sustainable Development

Series Editor:

Mohan Munasinghe

Chairman, Munasinghe Institute for Development, Sri Lanka

Director-General, Sustainable Consumption Institute, University of Manchester, UK

Honorary Senior Advisor to the Government, Sri Lanka

This series of volumes deals with the interaction between conventional economic growth and the more recent paradigm of sustainable development. A distinguished group of international experts drawn from a broad range of disciplines examine this nexus, and suggest ways for making development more sustainable in the future. The volumes cover both theory and practical applications at global, national and local levels:

1. The Sustainability of Long-term Growth: Socioeconomic and Ecological Perspectives
Mohan Munasinghe, Osvaldo Sunkel and Carlos de Miguel
(Edward Elgar, 2001)
2. Sustainable Energy in Developing Countries: Policy Analysis and Case Studies
Peter Meier and Mohan Munasinghe
(Edward Elgar, 2005)
3. Primer on Climate Change and Sustainable Development: Facts, Policy Analysis and Applications
Mohan Munasinghe and Rob Swart
(Cambridge University Press, 2005)
4. Macroeconomic Policies for Sustainable Growth: Analytical Framework and Policy Studies of Brazil and Chile
Mohan Munasinghe, Raul O’Ryan, Ronaldo Seroa da Motta, Carlos de Miguel, Carlos Young, Sebastian Miller and Claudio Ferraz
(Edward Elgar, 2006)
5. Global Agenda for Sustainable Governance of Ecosystems: Lessons from the Millennium Ecosystems Assessment
Janet Ranganathan, Mohan Munasinghe, and Frances Irwin
(Edward Elgar, 2007)

Making Development More Sustainable:

Sustainomics Framework and Practical Applications

Contents

<i>Foreword by James Gustave Speth</i>	<i>xi</i>
<i>Author's Prologue</i>	<i>xiii</i>

Part I: Framework and Fundamentals

1: OVERVIEW AND SUMMARY	1
1.1 Outline of the book	2
1.2 Rationale and motivations	7
1.3 Brief history and summary of sustainomics	21
1.4 Millennium development prospects and worldwide status	26
2: SUSTAINOMICS FRAMEWORK	32
2.1 Basic concepts and principles	32
2.2 Key elements of the sustainable development triangle	41
2.3 Integration of economic, social and environmental elements	47
2.4 Tools and methods for integrated analysis and assessment	57
2.5 Restructuring development and growth for greater sustainability	67
3: ECONOMICS OF THE ENVIRONMENT	76
3.1 Human activities and the environment	76
3.2 Conventional project evaluation	77
3.3 Measuring costs and benefits	82
3.4 Basic concepts for valuing environmental costs and benefits	87
3.5 Multi-criteria analysis	93
3.6 Discount rate, risk and uncertainty	96
3.7 Economywide policies and the environment	101
4: ENVIRONMENTAL AND SOCIAL SYSTEMS	117
4.1 Conceptual framework linking ecological and socio-economic systems	117
4.2 Property rights, governance and ecological-social linkages	125
4.3 Environmental and social assessment	135

Part II: Global and Transnational Applications

5: GLOBAL ANALYTICAL APPLICATIONS	143
5.1 Climate change and sustainable development	143
5.2 Applying the sustainomics framework to climate change	146
5.3 Climate change adaptation and mitigation	157
5.4 Global level interactions between climate change and sustainable development	161
5.5 Greenhouse gas mitigation prospects in Sri Lanka	166
5.6 Real options framework for carbon trading under uncertainty	178
6: INTERNATIONAL PROCESS APPLICATIONS: MULTI-LEVEL, MULTI-STAKEHOLDER, TRANS-DISCIPLINARY DIALOGUES	185
6.1 Global transdisciplinary scientific dialogue on climate change and sustainable development	185
6.2 Multilevel integration of millennium ecosystem assessment (MA) results and millennium development goals (MDG)	190
6.3 Using the AIM to analyse MA-MDG links at the national and global levels	194
6.4 Dams and development: multilevel, multistakeholder dialogue	201
6.5 Evaluation of the DDP (2001-2004)	207
6.6 DDP evaluation conclusions and results	210

Part III: National and Macroeconomic Applications

7: NATIONAL ECONOMYWIDE APPLICATIONS	223
7.1 Historical evolution of ideas	223
7.2 Empirical evidence	227
7.3 Framework for analysis	231
7.4 Case study of Brazil - making long-term development more sustainable	237
8: MATHEMATICAL MACRO-MODEL APPLICATIONS	255
8.1 Optimal growth models and sustainable development	255
8.2 Economic and non-economic costs and benefits of growth	256
8.3 An optimisation model: ECOL-OPT-GROWTH-1	258
8.4 ECOL-OPT-GROWTH-1 model conclusions	265
8.5 Macroeconomic policies, second-best theory, and environmental harm	266
8.6 Developing country case studies	269
ANNEX 8.1	274
ANNEX 8.2	279

9: COMPUTABLE GENERAL EQUILIBRIUM (CGE) MODELING APPLICATIONS	282
9.1 Economywide cross effects of social and environmental policies in Chile	282
9.2 Review of economic, social and environmental issues and policies	286
9.3 Interactions between social, environmental and economic policies	294
9.4 Chile case study conclusions	301
9.5 Economywide policies and deforestation in Costa Rica	302
9.6 Modeling approach	306
9.7 Main findings of the Costa Rica study	313
ANNEX 9.1	319
ANNEX 9.2	322
 Part IV: Sub-National Sectoral and System Applications	
10: ENERGY SECTOR APPLICATIONS	327
10.1 Energy and sustainable development	327
10.2 Framework for sustainable energy development (SED)	336
10.3 Applying SED to power planning in Sri Lanka	349
10.4 Energy policy options	355
10.5 Assessing the sustainability of energy policies in South Africa	360
10.6 Making electricity development more sustainable in the UK	366
11: TRANSPORT SECTOR APPLICATIONS	370
11.1 Generic priorities for sustainable transport	370
11.2 Health damage costs of air pollution in Sri Lanka	372
11.3 Traffic congestion – economic and environmental sustainability	378
11.4 Other options for reducing traffic congestion	391
11.5 Sustainable transport policy in Sri Lanka	399
12: WATER RESOURCE APPLICATIONS	404
12.1 Hydrological cycle and human actions	404
12.2 Water and development	408
12.3 Sustainable water resources management and policy (SWAMP)	416
12.4 Management of groundwater depletion and saline intrusion in the Philippines	421
12.5 Policy implementation issues	428
12.6 Simple water filtration method for cholera prevention in Bangladesh	431

13: FORESTS AND AGRICULTURAL SYSTEM APPLICATIONS	438
13.1 Sustainable management of tropical forests	438
13.2 Valuing forest ecosystems in Madagascar	449
13.3 Agriculture and climate change	456
13.4 Climate impacts on agriculture in Sri Lanka	459
14: RESOURCE PRICING POLICY APPLICATIONS	475
14.1 Sustainable pricing policy (SPP)	475
14.2 Extensions of the basic model	482
14.3 Calculating economically efficient prices based on strict LRMC	492
14.4 Adjusting efficient prices to meet other objectives	497
14.5 Sustainable pricing of water resources	502
ANNEX 14.1	509
ANNEX 14.2	515
Part V: Project and Local Applications	
15: PROJECT APPLICATIONS	523
15.1 Small hydro projects and sustainable energy development in Sri Lanka	523
15.2 Main findings of small hydro study	528
15.3 New and renewable energy projects: case study of solar photovoltaics (PV)	532
15.4 Sustainable rural electrification based on renewable energy	539
15.5 Evaluating a typical water supply project in a poor African village	555
16: LOCAL APPLICATIONS – HAZARDS, DISASTERS AND URBAN GROWTH	562
16.1 Sustainable hazard reduction and disaster management (SHARM)	562
16.2 The 2004 Asian Tsunami – a preliminary assessment	572
16.3 Sustainability of long term growth in Asian cities	588
16.4 Urban vulnerability, natural hazards and environmental degradation	595
16.5 Making urban development more sustainable in North America and Europe	601
<i>Bibliography</i>	606
<i>Index</i>	653

Foreword

Sustainable development is the foremost challenge to humanity in the 21st century. It affects every human being on the planet, and therefore, we are all stakeholders. Traditional development has focused on material-based economic growth to overcome problems like poverty, hunger, sickness and inequality. However, despite impressive progress during the past century, especially in the OECD and middle income countries, these issues have grown worse in most of the poorest countries, and even among poorer communities in the industrial world. New challenges like environmental degradation, violent conflicts, climate change and runaway globalization could exacerbate problems and make them unmanageable.

At the global level, several thousand leading scientists in the United Nations Intergovernmental Panel on Climate Change (IPCC) have clearly confirmed that human activities which emit greenhouse gases are leading to potentially catastrophic global warming. Similarly, the recent Millennium Ecosystem Assessment, commissioned by UN Secretary General Kofi Annan and written by foremost ecologists, has chronicled the steady decline of ecosystem services which support all life on the planet. They have urged early action to reverse this alarming trend. Yet, the alleviation of poverty among billions (who eke out their existence on less than one dollar a day) will require continued economic growth in those areas. Maintaining this balance among economic, social and environmental needs is the essence of sustainable development.

The powerful technologies and forces we have unleashed may have increasingly unforeseeable and unmanageable consequences. We need to act with the prudence and wisdom, suggested in Antoine de Saint Exupery's *The Little Prince*:

'The fox said to the little prince: Men have forgotten this truth, but you must not forget it. You remain responsible, forever, for what you have tamed.'

Therefore, Professor Munasinghe should be commended for writing a comprehensive, concise and clear volume that offers an immediate and practical path for making current development more sustainable, by applying the Sustainomics framework. He demystifies the complexities of sustainable development with a critical and probing analysis. This book is unique in not only presenting an easily understandable and rigorous conceptual framework, but also illustrating its practical applications using a wide range of empirical case studies.

Prof. Munasinghe first set out the basic principles of Sustainomics at the 1992 Earth Summit in Rio de Janeiro. This volume expands on that base, and describes the careful analysis and rigorous testing of the framework during the past 15 years. Key elements of Sustainomics include the fundamental approach of "making development more sustainable" (MDMS); the balanced applications of Mohan's widely recognized sustainable development triangle (with social, economic and

environmental dimensions); better integration by transcending conventional boundaries (imposed by discipline, space, time, stakeholder viewpoints, and operational needs); and practical application of innovative methods and tools throughout the full cycle (from data gathering to policy implementation and feedback). The methodology is elucidated with a number of practical case studies that are relevant over a wide range of geographic and time scales, countries, sectors, ecosystems and circumstances.

In this book, Mohan brings together a wide range of skills. As a respected and award winning researcher, his analysis is rigorous and well-documented. As a senior decision maker and manager with over 35 years of experience in the development arena, his advice is eminently practical. Finally, as a veteran university professor with an enviable record of publications, he presents his arguments lucidly and convincingly.

To conclude, this text written by a leading world authority on sustainable development is an invaluable resource for students, researchers, development practitioners, policy analysts, public and private sector decision makers, and, indeed, all concerned citizens.

Prof. James Gustave Speth

Dean, School of Forestry and Environmental Studies, Yale University; and former Administrator, United Nations Development Program, NY, USA.

January 2007

Author's Prologue

This book is a comprehensively revised and updated second edition of the original volume published in 2007, which had already reached a wide audience and was completely sold out some time ago. It is used in university courses worldwide, and the practical methods set out have been applied in many sectors in a range of countries – both south and north. The book is the sixth volume in the Munasinghe Institute of Development (MIND) series on growth and sustainable development.

A range of ideas about addressing the complex problems of sustainable development and poverty are set out in this text. Therefore, the reader may find some relevant background information helpful in understanding and interpreting my viewpoint. Physics and engineering were the first loves that sustained me all the way through a PhD. However, the lure of development was hard to resist and led me to concurrently pursue a post-graduate degree in development economics. This focus on the issues of poverty and development has continued ever since, and I have had no cause to regret the choice.

Early work in the development area during the early 1970s, helped me to concentrate on development planning and natural resource management (especially energy and water) -- amidst the “limits to growth” debate and the first oil crisis. Although the concept of sustainable development was not known at the time, much of this initial work on marginal cost pricing, integrated resource planning, and macroeconomic modeling was not only based on sound economic principles, but also included important social and environmental considerations including poverty, equity and externalities. From the mid-1980s my efforts shifted more towards environmental and natural resource issues and their links with macroeconomic policies and poverty. After the Bruntland report was published in 1987, I focused on getting a better understanding of the new concept of sustainable development.

The core framework of sustainomics was developed from around 1990, and now draws on more than 15 years of direct applications. Thus, the bulk of this book relies on work done since 1990. At the same time, sustainomics also makes use of previous research where the issues, principles and policy options involved are still relevant. Some of the broader development insights, concepts and case studies in this volume are based on over 35 years of professional work. During this period, hands-on involvement in designing and implementing projects and policies in a variety of countries helped to build up practical experience in development activities. Meanwhile, continuing research and teaching sharpened my analytical insights. The basic foundation for intellectual growth was of course the preceding two decades of formal education, as well as sub-conscious absorption of knowledge whilst growing up amidst the problems of development in Sri Lanka. To summarize,

I have learned about development while playing many roles – be it as a student or teacher, researcher or field practitioner, policy analyst or decision maker.

Two major international events (i.e., the 1992 UN Earth Summit in Rio de Janeiro and the 2002 UN World Summit on Sustainable Development – WSSD, in Johannesburg) provided major impetus for two seminal publications (Munasinghe 1992a, 2002a). The first paper set out the conceptual framework for sustainomics, based on the results of a major World Bank research programme that I led. At this time, the Vice Presidency for Environmentally and Socially Sustainable Development was established in the Bank, with the sustainable development triangle as its official logo. Shortly afterwards, some senior colleagues and I presented an important policy paper on Economywide Policies and the Environment to the Bank’s Board of Executive Directors, proposing policy remedies to address the adverse environmental and social impacts of structural adjustment programmes. The findings were then presented to the world’s finance ministers at a special seminar during the World Bank–International Monetary Fund fiftieth anniversary celebrations in Madrid, in 1994. Subsequently, my 2002 paper at WSSD elaborated on the initial sustainomics framework – based on a range of practical applications and lessons learned during the intervening decade.

Clearly, sustainomics is not the creation of one person. Isaac Newton’s classic remark about “seeing further by standing on the shoulders of giants”, is most appropriate¹. Thus, sustainomics is a practical transdisciplinary framework (or “transdiscipline”) which makes use of my own ideas, as well as many existing concepts, methods and tools developed by others – gladly acknowledged in the text. Such an eclectic approach is necessary because sustainable development is so broadly defined and vast in scope that it cannot possibly be dealt with by any single traditional discipline. Furthermore, there is no need to “re-invent the wheel”, when practical techniques and solutions are already at hand. Chapter 1 describes the main current rationale for writing this book. However, the original motivation that led to the neologism “sustainomics” was more basic – simply the lack of a discipline or practical framework that focused explicitly on sustainable development problems in a policy-relevant manner.

The first basic principle of sustainomics – making development more sustainable – was a practical reaction to the endless (and ongoing) theoretical debate on the ultimate definition of sustainable development. It motivates and validates those who wish to immediately address urgent issues like poverty and hunger. The second core element – balanced treatment of the sustainable development triangle – was prompted by the lively discussions that took place in the run-up to Rio 1992, about how the “three pillars” (environment, economy and society) might be integrated within development policy. It emphasizes that the sides and interior of the triangle (representing interaction among the three pillars) are as important as the

¹ Lohne, J. (1965) “Isaac Newton: the rise of a scientist”, *Notes and Records of the Royal Society London*, Vol.20, p.125-39.

three vertices. The third basic idea of transcending traditional boundaries (of discipline, values, space, time, etc.) has been around for many years, and proved quite appropriate for sustainomics. Finally, the kitbag of sustainomics methods and models includes some key policy-focused tools like the Action Impact Matrix (AIM), Issues-Policy Transformation Mapping (ITM), and Policy Tunneling that were developed specifically in the context of sustainomics. Others like sustainable development assessment (including cost-benefit analysis, and environmental and social assessment), environmental valuation, green accounting, various macroeconomic and sectoral models, etc. were borrowed from other disciplines, or adapted from existing material. The empirical case studies are designed to be not only rigorous applications of the theory, but also practical and policy-focused. The extensive bibliography should be useful to those who wish to further research specific topics.

A brief word would be appropriate here, about the creation of the Munasinghe Institute for Development (MIND) in the year 2000. Working many years abroad within the UN system provided me unique opportunities and insights. Nevertheless, I felt that I could improve my understanding of development problems and contribute more by taking early retirement and returning to live and work in Sri Lanka. This is a key decision I do not regret, because the view from Colombo is refreshingly different from the “Washington Consensus” perspective. The outcome was MIND, a small non-profit research centre based in Sri Lanka, whose official logo is the sustainable development triangle, and whose motto is “making development more sustainable”. A balanced South-North partnership, built on mutual-respect and cooperation is essential to save the planet. To facilitate this process, MIND is building capacity in the South, and fostering both South-South and South-North collaboration to address sustainable development issues.

During the course of this intellectual journey, I have benefited from my association with a wide range of people, each of whom has contributed generously to my understanding of development issues in his (or her) own way. While the core framework presented in the first few chapters of this book are based mainly on my own papers, the case studies have benefited greatly from ideas in selected co-authored publications.

The list of names of the many erudite colleagues I have collaborated with over the years is far too numerous to set out here, but among them special thanks are owed to those with whom I have had the privilege of co-authoring journal articles and books that are the sources of material on which parts of this volume are based. They range from young students and researchers to eminent experts and Nobel-prize winners. Working with them has enriched my professional growth and deepened my insights into the problems of development. Their valuable contributions are explicitly acknowledged in the relevant chapters. The honour list includes: Kenneth Arrow, Caroline Clarke, Matthew Clarke, William Cline, Wilfrido Cruz, Carlos de Miguel, Chitrupa Fernando, Claudio Ferraz, Sardar Islam, Susan Hanna, Paul Kleindorfer, Randall Kramer, Karl-Goran Maler, Jeffrey McNeely, Peter Meier,

Robert Mendelsohn, Sebastian Miller, Risako Morimoto, Raul O’Ryan, Annika Persson, Walter Reid, Niggol Seo, Ronaldo Seroa da Motta, Narendra Sharma, Walter Shearer, Joseph Stiglitz, Osvaldo Sunkel, Rob Swart, Jeremy Warford and Carlos Young.

I am equally grateful for the kind courtesies and good wishes extended by the following international journals where relevant papers have appeared: *Ambio*, *Conservation Ecology*, *Ecological Economics*, *Ecological Economics Encyclopedia*, *Encyclopedia of Earth*, *Environment and Development Economics*, *International Journal of Ambient Energy*, *International Journal of Environment and Pollution*, *International Journal of Global Energy Issues*, *International Journal of Global Environmental Issues*, *Land Use Policy*, *Natural Resources Forum*, *Natural Resources Journal*, *Proceedings of the IEEE*, *The Energy Journal*, *World Bank Economic Review*, and *World Development*.

Thanks are also due to the following institutions who have published books and monographs I have authored, from which material is drawn: Asian Development Bank (ADB), Asian Pacific Economic Cooperation (APEC), Beijer International Institute of Ecological Economics, Cambridge University Press, Butterworths-Heinemann Press, Edward Elgar Publishing, Intergovernmental Panel on Climate Change (IPCC), International Decade for Natural Disaster Reduction (IDNDR), International Society of Ecological Economics (ISEE), Johns Hopkins University Press, Organization for Economic Cooperation and Development (OECD), Sri Lanka Association for the Advancement of Science (SLAAS), United Nations Development Programme (UNDP), United Nations Environment Programme (UNEP), United Nations University (UNU), Westview Press, World Bank (WB) and World Conservation Union (IUCN).

Generations of students have helped to sharpen my concepts and logical thinking over the years. I would like to express my gratitude for the valuable feedback provided by students and faculty from the following academic and research institutions where I have given courses or lectures on various aspects of sustainable development in recent years: American University, USA; Asian Institute of Technology, Thailand; Boston University, USA; Cambridge University, UK; China Meteorological Administration, China; Colombo University, Sri Lanka; Concordia University, Canada; Federal University of Rio de Janeiro, Brazil; Gotenberg University, Sweden; Groningen University, Netherlands; Harvard University, USA; Indian Institute of Management (Calcutta), India; Indira Gandhi Institute of Development Research, India; Institute of Economic Growth, India; Institute of Social and Economic Research, India; Japan Development Bank, Japan; University of Manchester, UK; Massachusetts Institute of Technology, USA; Moratuwa University, Sri Lanka; Oxford University, UK; Peking University, China; University of Pennsylvania, USA; Peradeniya University, Sri Lanka; Ritsumeikan Asia Pacific University, Japan; Sorbonne University, France; State University of New York, USA; Tellus Institute, USA; TERI University, India; Tsinghua University, China; United Nations University, Japan; Wuppertal Institute, Germany;

and Yale University, USA.

I am deeply indebted to those who provided detailed and insightful comments, and helpful material, including: Johannes Opschoor, Rob Swart, and Harald Winkler. I also thank the following for useful suggestions and advice: Michael Chadwick, Nazli Choucri, Cutler Cleveland, Shelton Davis, Surendra Devkota, Sytze Dijkstra, Chitru Fernando, Prasanthi Gunawardene, Anders Hansen, Jochen Jesinghaus, Steven Lovink, Risako Morimoto, Eric Neumayer, John O'Connor, Paul Raskin, Terry Rolfe, Tom Schelling, Fereidoon Sioshansi, Nimal Siripala, Jeremy Warford, and Robin White. Thanks are owed to my class at the University of Manchester for their helpful comments, including: Carlos Ferreira, Liam Heaphy, Stephanie Heard, Ralitsa Hiteva, Andrea Murray, Paul Newill, Olumayowa Osundeko, Samuel Tetteh Partey, Mohammad Rahman, Maria Sharmina and Nathan Truelove.

The MIND team who helped to prepare this manuscript provided invaluable assistance for which I am most grateful. They include: Nishanthi De Silva, Yvani Deraniyagala, and Priyangi Jayasinghe. Irusha Dharmaratna, and Sudarshana Perera provided useful inputs to the first edition. Thanks are owed also to Rohan Wijesekera and Thakshala of Vijitha Yapa Publications, for their guidance in the final stages of production.

Last but not least, my wife Sria deserves special praise for her advice and steadfast support, and for putting up with the many impositions and pressures arising from the preparation of this book. Support provided by my children Anusha and Ranjiva and my late mother Flower Munasinghe were also much appreciated.

All my generous benefactors deserve full credit for their valuable contributions to the ideas expressed in this book. Any errors, omissions, shortcomings and misinterpretations are my own responsibility. I hope that the book will appeal to a wide audience, including students, researchers, teachers, policy analysts, development practitioners, public and private sector decision makers, concerned citizens and stakeholders.

To conclude, sustainomics is a basic framework that needs to be fleshed out. It is like a giant jigsaw puzzle, with some gaps and pieces that do not quite fit. Nevertheless, it does seem to provide a promising and practical start, which is allowing the bigger picture to emerge. My earnest hope is that other practicing and potential “sustainomists” will step forward to rapidly correct any errors, reconcile inconsistencies, and fill in the empty spaces in the framework, in the process of moving on towards the ultimate goal of sustainable development. The final take home message is optimistic – i.e., although the problems are serious, an effective response can be mounted, provided we begin immediately. Sustainomics can help to show us the first practical steps in making the transition from the risky business-as-usual scenario to a safer and more sustainable future.

Mohan Munasinghe

January 2010
